

Essentials tools for loom building and repair in the workshop or race truck.

This hand picked selection of tools provides a great array of hand tools for loom building and repair. Quality tools from name brands, each tool has been selected based on our years of experience and all have proven reliability.

If your just starting out or just needing to stock your race team with the right tools for wiring and loom building it can be tricky to find the right tools at the right price. Two things this kit does really well, the tools your wiring technician needs and without breaking the bank.

When you see comprehensive tool kits, your next thought is 'are the tools any good?' All the tools are selected because we use them daily and are from quality brands such as IDEAL, RS Pro, SwanMorton, IWISS, William Whitely and WERA. Equally, no team has an infinite budget and we have found alternatives to some of the expensive propitiatory crimp tools that would cost the same as this whole kit for just a single tool.

The kit is supplied in a zip pocket tool roll, this works great as you can take the tools to the job and quickly pack down at the end of the event. Everything is held in one place but with room for more tools as you get them. The tool roll can be hung from a wall hook and then rolled up for storage.

FEATURES

- Wire strippers and shear IDEAL 16 – 26 AWG
- Flush cutters with a longer lasting but precise semi-flush anvils
- Needle nose pliers with a fine, non serrated nose.
- 150mm Steel rule, metric and imperial for wire trimming measurements.
- Retractable scalpel with 10A blade from Swan Morton.
- Indent crimp tool for solid bucket pins and sockets such as DTM and DT
- Stainless Steel Tweezers in a 3SA fine tip profile.
- Compact Tape measure for loom measurements.
- WERA precision screwdrivers, 4 flat and PH00, PH0
- Solder Tools kit, excellent for service looping, de-pinning and connector picking
- Electrician Scissors, these things will cut almost anything from dymo labels to mains cables
- Non Insulated Crimp tool. 3 single width dies which suit common ring and spade terminals
- Tube splice crimp tool. Suits compact copper tube crimps including TE Miniseal
- Forceps/Seizures in stainless steel. Very handy being halfway between tweezers and needle nose.

* For Deutsch Autosport and Souriau crimping and positioners see the WireTrain Indent Crimp Tool Kits
As supplier stock changes, the exact model of tool provided may change but the quality never will!
