

# FIELD SOLDERING KIT

A soldering kit for the workshop or race truck, power and precision to get the job done.

Hitting the balance between functionality, quality and affordability. This kit has been well thought out and based on years of experience of different products. It gives you or your team an excellent capability and is easily stored in the supplied tray.

The 60W solder station has the power for larger jobs but the control for PCB and delicate connector work. The pencil type solder iron and high flex cable is ideal for working at tricky angles, combined with a stable iron holder. We supply a brass wool tip cleaner this does not degrade the tips as traditional wet sponges can. The Solder station comes as standard with a fine tip but we supply a spare tip in the more useful 1.2mm chisel style.

For those de-soldering jobs you need a range of options, a solder sucker, soft copper wire and fluxed solder braid are provided, with these most jobs can be tackled with confidence. Working away from your normal bench a pair of helping hands is essential for those tricky jobs where you need both hands for the soldering process.

The whole kit is stored in a euro 1/2 tray which fits inside your existing 600x400 eurobox systems. This also allows the whole kit to be taken to the car or tidily setup at the back of the race truck. There is enough room to leave the cables attached, speeding up that emergency job as you just plug in the power and go. The tip is up to temp in 30 seconds.

## FEATURES

- 60Watt Solder station
- 230V UK Power
- 3 Temperature user presets
- Easy to use pencil type soldering iron
- Spare tip supplied
- Good spare tip availability, Tenma compatible.
- 200 to 450c temperature range
- Automatic standby and shutdown

- A reliable solder sucker which pulls a strong vacuum when triggered.
- 100g reel of flux cored leaded 60/40 0.7mm solder, ideal for general repair
- 100g reel of lead free SnCu 0.7mm solder, a good alternative where lead free is needed
- Soldering Iron stand and brass wool tip cleaner.
- Helping hands
- Flux coated solder wick #5 1.5m & Soft copper wire to be used for tricky de-soldering jobs.
